EZEQUIEL CARDONA
Full-stack developer

SUMMARY

As a passionate and creative software developer, I have honed my skills and expertise through a variety of experiences. Beginning my career as a freelance web developer, I gained valuable professional communication skills and learned the importance of taking ownership of my work.

As I pursued more technical work, I mastered JavaScript, PHP, and databases, building server-side rendering apps. This led me to specialize in React and front-end development.

Building on this foundation, I joined a leading software consultancy, where I grew into a full-stack JavaScript developer with a focus on React and Node. I am excited to bring my skills and experience to new challenges and opportunities.

MAIN SKILLS

FRONT-END:
- React fundamentals, use of *React hooks*, and creation of custom ones.
- Use of *Redux Toolkit* for global state management.
- Use of *react-testing-library* for unit and integrational testing.
- Use of design templates like *Material UI* or *Bootstrap*, and other style controls like *CSS modules* or *styled components*.
- Use of *Three.JS* for 3D UX.
- UX history tracking and analyzing for constant user flow experience, with tools like *Google Analytics* and *Hotjar*
- Solid use of *HTML* and *CSS* for rendering FE.
- Use of the main techniques for SEO.

BACK-END:
- Node.js fundamentals. Use of frameworks like *Nest.JS* or *Express.JS*, for building RESTful APIs or server-side apps. Authentication, security, and error handling.
- Use of tools like *Sequalize for controlling PostgreSQL* and *Mongoose* for MongoDB.
- Use of *Docker* and *Kubernetes* for creating, managing, and deploying microservices.
- Unit tests with tools like Nest.js Spec library.
- Use of PHP for building server-side apps.

OTHERS:
- Use ESLint and Typescript for code formatting, and data typing.
- Use of agile methodologies for grooming and implementing product requirements.
- Use of Heroku and Netlify for serving remote applications.
- Use of GIT methodologies for running and maintaining an app at production.

PROJECTS

React + Node web app collaborations:
- https://launchpod.agileengine.com. An automation tool for job applicants to run their own process.
- Developer Submission Profile. An intern automation tool for a big software consultant recruitment process.

React + PHP web app creation:
- https://ferranelotro.info/website

JavaScript + PHP web app creation:
- https://venecambiospana.com

CMS website building, SEO, CRM integration, and data management:
